

## TECHNICAL SHEET

### BONUS TERMINAL BL15

Bonus terminal is used for granting bonus to an inserted ticket and for releasing a payment-ticket for making parking fee payment in 3rd party cash desk. It is commonly used for supermarket parking lots. Parking fee payment is made directly in the mall's cash desk without any direct integration with the parking system.

#### Mechanical construction

Bonus terminal is placed in a stainless steel cabinet.

#### Dimensions:

Height	140 mm
Width	150 mm
Depth	180 mm

#### Assembly:

Bonus terminal parts:

- Parking ticket QR code Reader
- EAN code Printer
- Controller
- LAN

#### Power supply

12VDC

BL15 Bonus terminal provides a possibility to make a parking fee payment in a 3rd party cash desk. After inserting the parking ticket to the device slot, the ticket is accepted and moved inside the device. The reader reads data from the ticket's QR code and evaluates the parking fee. If the fee is more than zero, the terminal prints an EAN code with a text to the empty place in the parking ticket and the ticket is dispensed. The cashier presents the ticket to the cash desk's EAN code reader which creates a payment item/receipt. The customer is then allowed to exit parking lot within the allowed time of the paid parking fee.
