- Parking Post
- LPR Camera
- Barrier

ENTRY AND EXIT POINT

## Smart Ticketless Parking System

Ensures smooth parking flow. Customers parking within a free parking time range exit without any further operations. You don't need to burden yourself with the parking system administration. Our maximized remote support service will minimise your operational interactions.

# Standard parking transaction cycle

## ENTRY

**LPR - 2 times faster than with a ticket**

Entering vehicle is scanned by fast LPR camera and registered in the parking system.

In case the licence plate is not readable (e.g. dirty or snowy licence plates in the winter time) or the recognition fails, Entry Post releases a paper ticket which will serve as an ID media for the parking transaction cycle.

Entry Post uses voice messages to inform the driver.

# Standard parking transaction cycle

## EXIT

cashless payment

LPR - 2 times faster than with a ticket

Entering vehicle is scanned by fast LPR camera and evaluated in the system. The customer uses ticket if received at the Entry Post.

If the free parking period is exceeded, the customer makes a bankcard payment at the Exit Post POS terminal.

If the customer does not have a valid bankcard and the mall is already closed, they may pay by the mobile app. Otherwise they receive a receipt with payment details. The customer will be charged with this fee at the next visit of the supermarket.

# Secondary payment methods

## In case a visitor needs to make a cash payment

Using the infoterminal's touchscreen the customer enters the licence plate. The screen displays the car's image at the entry with recognized licence plate. After confirming the data, the customer receives a ticket which will use at the supermarket cash desk for paying the parking fee.

# Secondary payment methods

## Mobile parking fee payment

Using mobile application, visitors may utilize the comfort of making a payment while sitting in the car and thus leave the parking lot fast.

With the app-registered license plate and stored bankcard the app even **makes the payment automatically** therefore no action is required. The visitor is notified about the payment.

While parking, the app also informs the visitor about the parking details: entry time, parking fee, etc.

## LPR Cameras

Easy and fast entry and exit flow using licence plate recognition. Tickets are used in case of LP recognition failure.

## Voice messages

Customer is automatically notified of system transaction and instructed to park, leave or pay the parking fee.

## Cashless payments

Exit posts equipped with POS terminals for an easy card payment. Infoterminals for cashless payments.  
Mobile payments with ParkDots mobile App.

## Cash payments

Regular shopping-centre cash is used by scanning the Infoterminal provided ticket with parking fee item.

## Permanent Access

VIP persons or employees may be register for free parking lot access using licence plate registration or RFID card.

## Security cameras

Video recording for security reasons and possible accident resolutions at the parking posts point.

## Supervision centre

For the operator comfort automatic and manual interactions or instructions are provided remotely when an issue arises.

## Notification Services

Parking operator(s) may receive regular reports or transaction notices for keeping a complete parking system overview and control.
