

### About License

Rezidents module for residential type of users.

### Description

The module gives the administrator ability of creating users with limited validity, using a generated QR ticket and/or entering one or more license plates. After the registration, the user is sent an email with the ticket. The ticket may be used by presenting it to the entry/exit post scanner. If a license plate is registered and recognized by parking posts, the access is automatic. Validity may be prolonged automatically or manually. Group settings enable specific access settings for different rezident groups, pre-defined issue limit (maximum number of users for a group according to the number of parking places). Multiple license plates for users is supported (one entry at a time allowed).

Complex settings for various price models are supported including free and paid time frames, resulting a cumulation for monthly charge by an invoice. Optionally, users may be charged in advance for the parking period in an external system without any further parking dependent price cumulation.

### Platform

Web application, submodule of PSP

### Prerequisites

ParkIS Main

The image displays three screenshots from the ParkingPortal web application. The first screenshot shows the 'Create Resident' form with fields for User ID, First Name, Last Name, Phone, Email, Language, Valid From, and Valid Until. The second screenshot shows the 'Update Resident Group: Monthly ticket 24h' form with fields for Name, Company ID, Group ID, Limit ID, Max Issue, Price, Currency, and Valid Days. The third screenshot shows a 'Registered Parking Access' QR code with details: License plate: FG654MB, RF777CV; Valid from: 2021-12-08 17:08:15; Valid until: 2022-01-09 00:00:00. The QR code is from Metropolitan Star Bratislava and has ID 21231045X00.
